PROFESSIONAL SUMMARY

CompTIA Security+ certified Master of Cybersecurity student with an Honours Bachelor of Information Technology and hands-on TryHackMe SEC0 training. Foundation in security operations, vulnerability management, network security, incident response, identity and access management, and risk and compliance. Brings Python, SQL, Windows, Linux, REST API, troubleshooting, and technical documentation skills to a Winter 2027 cybersecurity internship, with a strong interest in OT and enterprise security.

CORE SKILLS

Security: Vulnerability management concepts, NIST Cybersecurity Framework, CIS Controls, risk assessment, incident response, IAM and access control, endpoint security, network security

Networking and Systems: TCP/IP, DNS, DHCP, VLANs, ACLs, routing, ports and protocols, Windows, Linux, Nmap, tcpdump

Development and Tools: Python, SQL, PostgreSQL, Flask, REST APIs, Git/GitHub, Docker, JavaScript, Java, C#

CERTIFICATIONS

CompTIA Security+ | Issued Aug 2026 | Valid through Aug 2029

Google Cybersecurity Professional Certificate | Issued May 2026

Google Cloud Modern Security Operations | Completed Sep 2025

EDUCATION

Master of Cybersecurity | Toronto Metropolitan University | Toronto, ON | Expected Aug 2027

Relevant coursework: Fundamentals of Information Assurance; Fundamentals of Security Technologies

Honours Bachelor of Information Technology | York University | Toronto, ON | Dec 2025

Relevant coursework: Systems Architecture; Systems Analysis and Design; Applied Statistics; Object-Oriented Programming

CYBERSECURITY TRAINING

TryHackMe SEC0 | In Progress | 2026

- Completing hands-on labs in cybersecurity fundamentals, networking, Windows and Linux security, and security operations.

TECHNICAL PROJECTS

DarjahAI | Flask, PostgreSQL, Docker | Dec 2025–Feb 2026

- Built and deployed a Dockerized web platform with authentication, 5+ core modules, and 5+ JSON endpoints covering tasks, progression, analytics, chat, and subscriptions.
- Used Git-based deployment and resolved application, database, and configuration issues across development and production environments.

Information Retrieval Project | Python | Mar–Apr 2025

- Built a modular indexer and searcher for 20 topics using TF-IDF, BM25, cosine similarity, and ranked output for up to 1,000 documents per topic.

TECHNICAL EXPERIENCE

Volunteer Software Developer | Droplet Lab | Apr 2026

- Translated product specifications into a 19-step offline Android onboarding workflow with checkpoints, permissions, completion checks, and support handoffs.
- Troubleshoot Android and native build setup using Pixel emulators and an NDK r19 compatibility fix; coordinated technical walkthroughs to understand the Java and C++ codebase.

Volunteer Web Developer | Insurpro.ca | Apr 2026

- Resolved a production WordPress editor failure by clearing caches, testing safe mode, reviewing configuration, and isolating 7+ plugins; identified an ElementsKit dependency and completed the update with a controlled workaround.

Independent Programming Tutor | 2022–Present

- Provide one-to-one programming support, debug code, and explain technical concepts clearly while managing client communication, scheduling, and competing priorities.
